Impero EdLink is our education-specific mobile device management (MDM) solution designed to centralise the configuration and management of mobile devices. Providing consistency between school and home learning, Impero EdLink's intuitive features support digital learning across mobile devices, while ensuring learners are kept safe along the way.

What makes Impero EdLink different?

- Education-specific
- Cross-platform MDM
- Support for educators and parents
The key features

Time & geolocation management
Allowing schools to control device applications and settings, based on location, with intelligent SSID, GPS and Beacon technologies. Geolocation tech notifies when a device enters or leaves the geofence and helps to quickly locate a device and its user.

Multi-school dashboard
Providing a single view of schools within a multi-academy trust to offer centralised profile management. Cascading granular control with delegated privileges ensures that control cannot be overridden at a school level.

Provisioning & controls
Managing access to applications and content as per the school’s acceptable use policies (AUPs). Set up flexible controls based on time, user, year groups, or device location, ensuring only age-appropriate content can be accessed.

Multiple enrolment options
Delivering bulk enrolment through Apple (ASM), Google (GSuite) and Android (EMM) allows students to enrol through QR codes or URLs. Automatically link users to a device upon an initial login, with a simple school transfer option if required.

Control device settings
Installing or updating applications on all devices in bulk saves valuable time. Centrally control which applications can be used on the device when in or out of school. Change the configuration of devices easily, such as enforcing safe search, keeping you in control.

Associate devices with users
Simplifying reporting by associating devices with user accounts (making it easier to identify who’s who) and viewing data in a real-time dashboard. See other useful information, including device/user location history, and notifications of user activity.

Create application catalogues
Creating a catalogue of applications, books and media, which students can download to their device when required. Provide a broad range of resources for students while minimising the impact on device storage space.

Granular reporting and analytics
Delivering granular reports on online activity and device usage, including the ability to view data (such as device history or non-syncing devices) via a real-time dashboard. Advanced data filtering and configured filters provide in-depth insight.

Offsite filtering & parental controls
Supporting home learning and protecting students by filtering activity wherever the device is located, including when students have taken devices offsite, to give schools and parents assurance that inappropriate content cannot be accessed.
## The key benefits

<table>
<thead>
<tr>
<th><strong>Support BYOD and 1:1 initiatives</strong></th>
<th><strong>Simplify MDM</strong></th>
<th><strong>Safeguard students</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Enable monitoring and management of both school-owned and student-owned devices at school and at home, with the access and configuration allowed by the school network.</td>
<td>Centralise the configuration and management of mobile devices, and enable zero-touch deployment, making them simpler to set up, control and update, even across platforms.</td>
<td>Protect students by controlling access to applications and online content via comprehensive privacy controls.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Track device location</strong></th>
<th><strong>Enhance mobile learning</strong></th>
<th><strong>Meet education requirements</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Track the physical location of a device with location-aware profiles, to help with asset management, loss or theft recovery and device mix ups.</td>
<td>Monitor and manage mobile devices across the school site, with access to real-time updates on the status of devices, to facilitate an efficient mobile learning environment.</td>
<td>Designed specifically for the education sector, Impero EdLink’s features and special pricing have been developed with education in mind.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Save time</strong></th>
<th><strong>Optimise performance</strong></th>
<th><strong>Support cross-platform environments</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Automate several tasks and processes (including application management and bulk enrolment) to reduce manual operations, saving masses of time for school technical teams.</td>
<td>Ensure all applications and platform operating systems are up-to-date for every learner, allowing for effective use of devices for digital learning.</td>
<td>Support iOS, Chrome OS, macOS and Android devices from a single view to enhance transformational learning through a cross-platform digital learning environment.</td>
</tr>
</tbody>
</table>
The complete device management package

Supporting school-owned and student-owned devices, Impero EdLink, alongside Impero Education Pro, ensures that technical teams have access to a complete suite of network admin tools for effective monitoring and management across all devices. Impero Education Pro’s classroom management and online safety features provide teachers and safeguarding staff with a multitude of tools to keep students focused and protected when using mobile devices to support learning.

impero education pro

How Impero Education Pro works

Impero Education Pro consolidates classroom management, online safety and network management tools allowing schools to proactively monitor, control and manage Windows, Chrome OS, macOS and iOS devices on the school network, all from a single view.

From focusing learning, updating devices, scheduling machines to power on/off, to monitoring what students are accessing online, Impero Education Pro gives you the tools you need to manage your computer labs and mobile devices efficiently.

How Impero Education Pro and Impero EdLink work together

Using Impero Education Pro and Impero EdLink together allows schools to have complete coverage for the monitoring and management of all their devices.

The benefits of cross-platform device management

- Access all devices in a single view
- Support school-owned and student-owned devices effectively
- Keep students safe on every device
- Ensure a safe and secure school network
- Enhance personalised learning with a flexible digital learning environment
