impero
ed**protect**

Impero EdProtect is our comprehensive cloud-based capture management module for student online safety in education. It identifies potential warning signs of at-risk behavior across all digital activity, so you have visibility of what your students are viewing, accessing or creating online. Focused on fostering a culture of good digital citizenship in schools, **Impero EdProtect** helps schools to adopt a best practice approach to student online safety.
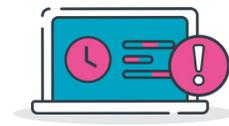

The key features

Keyword detection

Identifying key words, phrases, abbreviations or acronyms (typed or viewed anywhere on the network or online) and capturing the incident to help pinpoint vulnerable students potentially engaged in at-risk behavior.

Keyword detection libraries

Utilizing regularly updated keyword libraries, developed in partnership with a number of charities and specialist organizations, to flag concerns and provide definitions relating to a broad range of safeguarding issues.

Customized keyword policies

Empowering schools to add their own terms to detect content in relation to their own individual challenges, whether specific incidents, student names and/or gang references, as well as local terminology.

Context analysis

Taking a screenshot or video recording with each keyword capture, to provide context and 'who, what, where, when' information when triaging incidents.

Capture management

Providing a historic log of all online activity, including screenshot and video captures, with incident handling and reporting tools to evidence misconduct or student safety risks, which can be shared with external agencies where necessary.

Enforce acceptable use policies

Reminding students how to behave responsibly online by enforcing acceptable use policies and running reports to measure their efficacy.

Anonymous student reporting

Enabling students to report concerns (anonymously if they choose) about themselves or another student to a trusted member of staff.

Teacher alerts

Alerting teaching staff in real time if a keyword capture is triggered in their classroom so they can address the issue as it happens.

Reporting and analytics

Displaying all student online safety data down to a granular level and producing detailed reports for the relevant members of staff to review and analyze.

The key benefits

Provide contextual insight

By providing the context to any keyword captures (with a screenshot or video recording), staff members can deal with incidents quickly and effectively, identifying potential patterns of at-risk behavior.

Promote good digital citizenship

Empowering young people to navigate the digital world safely and responsibly, by educating them on risk and appropriate behavior, so they will make the right decisions whether in or out of the school's digital environment.

Keep students safe

Adopting both a proactive and reactive approach to student online safety, **Impero EdProtect** detects the early warning signs so that school staff can intervene early in potentially high risk situations before they escalate.

Support best practice

Developed in line with a best practice approach to student online safety, **Impero EdProtect** involves the whole school community and alerts the relevant staff members to incidents as they occur.

Educate counselors

Working with specialist organizations, industry experts and charities, **Impero EdProtect**'s keyword libraries include detailed definitions and severity ratings. This helps to inform and guide staff members when they are alerted to a keyword capture.

Support CIPA compliance

Supporting compliance with the Children's Internet Protection Act (CIPA), **Impero EdProtect** adds an additional layer over traditional blocking and filtering by monitoring students online to detect and address online risks.

impero educationpro

As part of Impero Education Pro

Impero EdProtect can be purchased standalone or as part of the **Impero Education Pro** suite, for a more comprehensive approach to device monitoring and management. Deployed as part of **Impero Education Pro**, **Impero EdProtect** fully integrates with **Impero EdTeach** and **Impero EdAdmin** so that classroom control and network management can be delivered with student safety at the core.

impero edaware

Integrate with Impero EdAware

Using **Impero EdProtect** alongside **Impero EdAware** provides a holistic approach to managing student safety incidents and risk indicators – whether they occur in the physical world, the digital, or both. Risk often manifests itself in the online world long before it becomes an issue in the physical world – with **Impero EdAware** and **Impero EdProtect** integration, these warning signs can be detected early.
