

Impero EdProtect is our comprehensive cloud-based capture management module for student online safety in education. It identifies potential warning signs of at-risk behavior across all digital activity, so you have visibility of what your students are viewing, accessing or creating online. Focused on fostering a culture of good digital citizenship in schools, **Impero EdProtect** helps schools to adopt a best practice approach to student online safety.

The key features

Keyword detection

Identifying keywords, phrases, abbreviations or acronyms (typed or viewed anywhere on the network or online) and capturing the incident to help pinpoint vulnerable students potentially engaged in at-risk behavior.

Keyword detection libraries

Utilizing regularly updated keyword libraries, developed in partnership with a number of charities and specialist organizations, to flag concerns and provide definitions relating to a broad range of safeguarding issues.

Context analysis

Taking a screenshot of each keyword capture helps to provide context, along with 'who, what, where and when' information, ideal when triaging incidents.

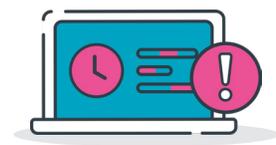

Capture management

Providing a suite of incident handling tools for triaging captures, to identify and evidence risk, which can then be securely shared with external agencies where appropriate.

Audit trail

Providing a comprehensive view of all captured incidents, including a detailed record of any actions (such as assigning a severity rating) associated with a specific capture, in order to ensure the integrity of a school's student safety data.

Detailed analytics

Displaying key trends by keywords, users and risk subjects, along with captures over time, surfacing critical data which can be acted upon quickly when appropriate.

Our online safety partnerships

Impero has partnered with a range of charities and specialist organizations to help develop **Impero EdProtect** including:

The key benefits

Provide contextual insight

Providing a glossary definition of a particular keyword or phrase helps staff to consider the capture within the correct context, so incidents can be dealt with quickly and effectively, while also identifying patterns of at-risk behavior.

Promote good digital citizenship

Empowering young people to navigate the digital world safely and responsibly, by educating them on risk and appropriate behavior, so they will make the right decisions whether in or out of the school's digital environment.

Keep students safe

Adopting both a proactive and reactive approach to student online safety, **Impero EdProtect** detects the early warning signs so that school staff can intervene early in potentially high risk situations before they escalate.

Support best practice

Developed in line with a best practice approach to student online safety, **Impero EdProtect** involves the whole school community and alerts the relevant staff members to incidents as they occur.

Educate staff

Working with specialist organizations, industry experts and charities, **Impero EdProtect**'s keyword libraries include detailed definitions and severity ratings. This helps to inform and guide staff members when they are alerted to a keyword capture.

Support CIPA compliance

Supporting compliance with the Children's Internet Protection Act (CIPA), **Impero EdProtect** adds an additional layer over traditional blocking and filtering by monitoring students online to detect and address online risks.

impero
education pro

As part of Impero Education Pro

Impero EdProtect can be purchased standalone or as part of the **Impero Education Pro** suite, for a more comprehensive approach to device monitoring and management. Deployed as part of **Impero Education Pro**, **Impero EdProtect** fully integrates with **Impero EdTeach** and **Impero EdAdmin** so that classroom control and network management can be delivered with student safety at the core.

impero
ed aware 

Integrate with Impero EdAware

Using **Impero EdProtect** alongside **Impero EdAware** provides a holistic approach to managing student safety incidents and risk indicators – whether they occur in the physical world, the digital, or both. Risk often manifests itself in the online world long before it becomes an issue in the physical world – with **Impero EdAware** and **Impero EdProtect** integration, these warning signs can be detected early.
